App List for iOS

This is not a comprehensive list of apps for music education (there are thousands), but these apps represent a collection of good and reliable apps that can be used in the music classroom. If you know of a great app that belongs in this list, please e-mail me and let me know. I cannot guarantee that any app will be included in this smaller list (see my interactive book on the iBookstore, [iPads in Music Education](#), if you are interested in a larger list), and I was not paid by any developer to include their app in this list. Many of these apps are apps that either I or my students use.

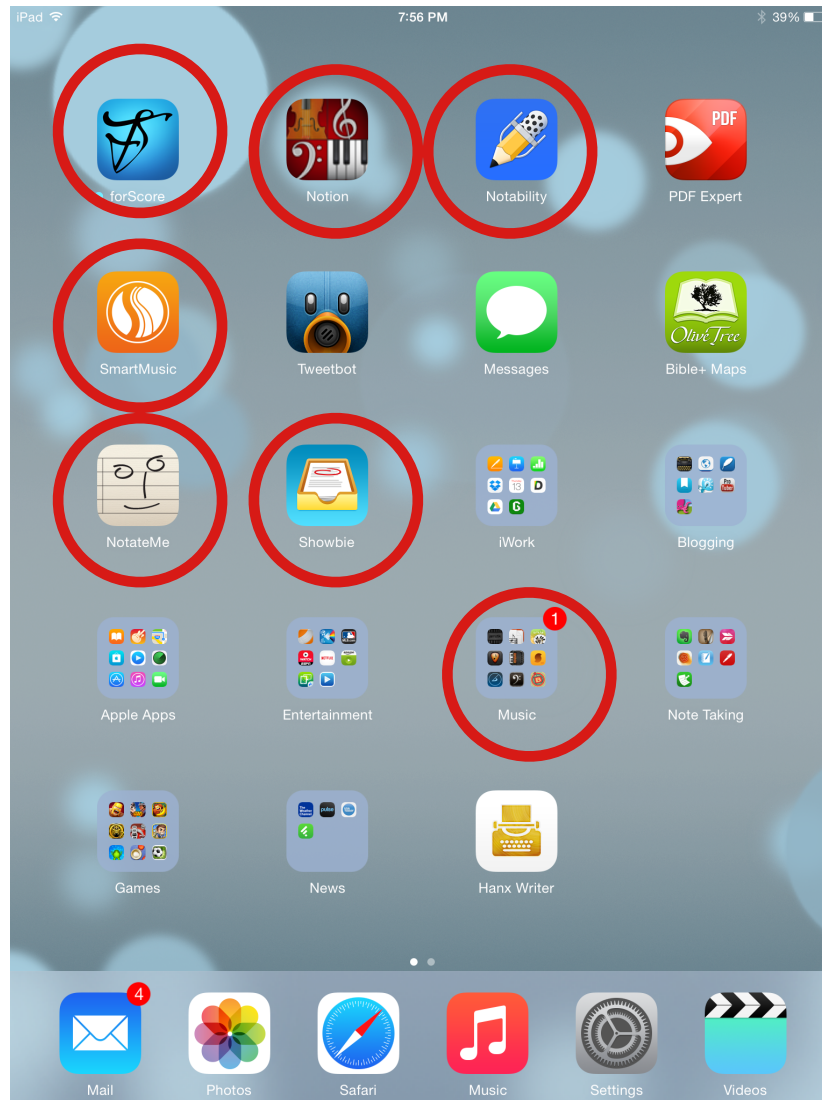

This list of apps is using links with referral codes. If you click a link and purchase an app, roughly 7% of the purchase price of the app is awarded to me, out of Apple's 30%. Whether you use a referral code or not, the price of the app is the same, and the developer earns the same amount per app. All apps are "paid apps" (some have In-App Purchases) unless they are
